

Z39.50 and the Web

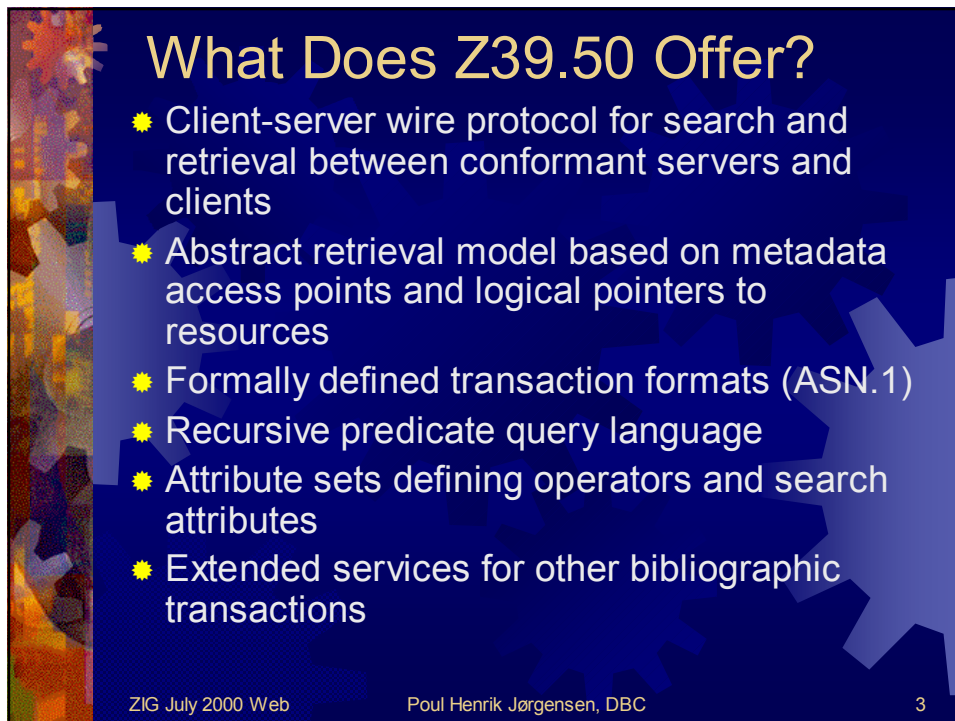

ZIG July 2000
Poul Henrik Jørgensen, phj@dbc.dk
Danish Bibliographic Centre,
www.dbc.dk

The Devil's Advocate

- ☀ *"Why are Z39.50 facilities in standard library systems (often) so poor?"*
 - because users don't ask for Z39.50?
 - because users don't understand Z39.50?
 - because developers don't understand Z39.50?
 - because vendors prefer proprietary protocols?
 - because Z39.50 is difficult to implement?
 - because Z39.50 toolkits are obscure?
 - because Z39.50 Services are irrelevant?
- ☀ - or because the alternatives seems better?

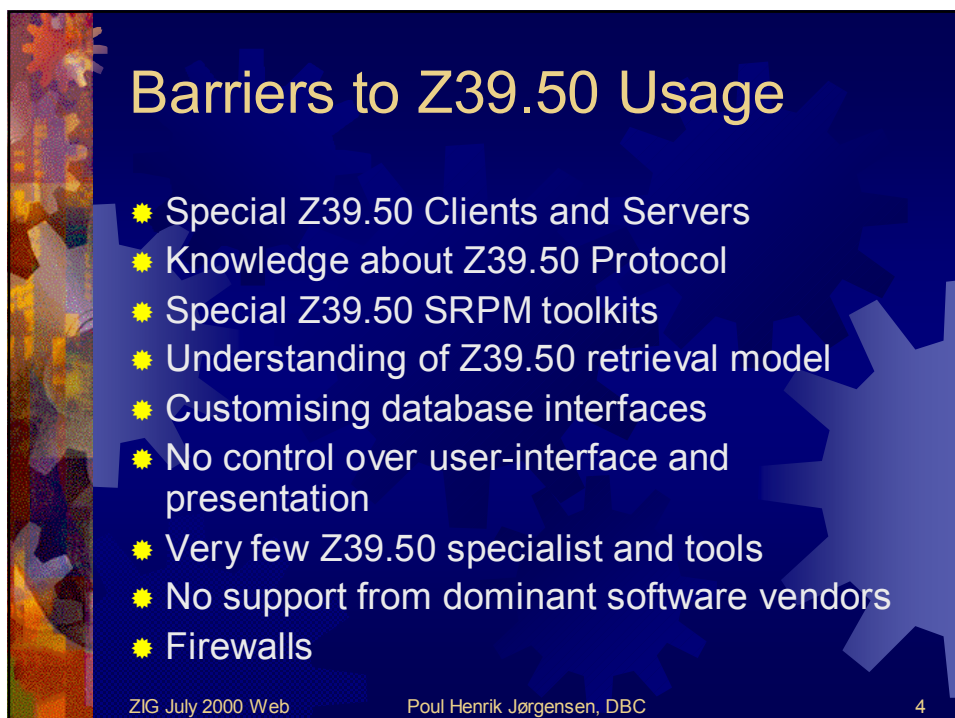

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 2

What Does Z39.50 Offer?

- Client-server wire protocol for search and retrieval between conformant servers and clients
- Abstract retrieval model based on metadata access points and logical pointers to resources
- Formally defined transaction formats (ASN.1)
- Recursive predicate query language
- Attribute sets defining operators and search attributes
- Extended services for other bibliographic transactions

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 3

Barriers to Z39.50 Usage

- Special Z39.50 Clients and Servers
- Knowledge about Z39.50 Protocol
- Special Z39.50 SRPM toolkits
- Understanding of Z39.50 retrieval model
- Customising database interfaces
- No control over user-interface and presentation
- Very few Z39.50 specialist and tools
- No support from dominant software vendors
- Firewalls

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 4

Z39.50 Search Example

The screenshot shows a search window titled 'Søgning' with the following details:

- Database: Danbibv2
- Buttons: Søg, Skan, Nulstil, Stop
- Search criteria:
 - Søgning: Emne ord = "hamlet" (Trunkering: (ingen), Skan term:)
 - og Emne ord = "shakespeare" (Trunkering: (ingen), Skan term:)
 - og Titel sætning = (Trunkering: (ingen), Skan term:)
- Side visning: Note ord, Nummer, Korporationsnavn n, Sættitel, Uniform titel, Dewey kode, UDC kode, OCS kode
- Antal adgang: 10
- Postformat: Xml
- 277 poster er fundet
- Results table:

Nr.	Post
<input type="checkbox"/> 1	Borkhuis, Charles: Mouth of shadows - c1999
<input type="checkbox"/> 2	Shakespeare, William: Hamlet - c1998
<input type="checkbox"/> 3	Cavechi, Mariacristina: Shakespeare nostro contempora...
<input type="checkbox"/> 4	Whitesides, Nigel: Hamleth - c1999
<input type="checkbox"/> 5	Corum, Richard: Understanding Hamlet - 1998
<input type="checkbox"/> 6	Shakespeare, William: The first quarto of Hamlet - 1999
<input type="checkbox"/> 7	Weiss, Tanja: Shakespeare on the screen - 1999
<input type="checkbox"/> 8	Melech, L. A.: Highlights in Hamlet - 1998
<input type="checkbox"/> 9	Piyor, Felck: The mirror and the Globe - 1992
<input type="checkbox"/> 10	MacCary, W. Thomas: Hamlet - 1998
- Postoversigt:
 - 1 - Borkhuis, Charles: Mouth of shadows - c1999
 - Borkhuis, Charles
 - Mouth of shadows : two plays / Charles Borkhuis. - Cathedral Station, N.Y. : Spuyten Duyvil, c1999. - p. cm
 - ISBN: 1881471322
 - Emne: Shakespeare, William, 1564-1616, Hamlet
 - Contents: Hamlet's ghosts perform hamlet -- Sunspots

What does the Web offer?

- ☀ Free Browsers and Servers
- ☀ Relatively trouble free interoperability
- ☀ Web harvesters and search engines
- ☀ Access to text searches and unstructured documents everywhere
- ☀ No previous experience required of users
- ☀ Thousands of implementers and excellent tools
- ☀ Supported by almost everybody

ZIG July 2000 Web Poul Henrik Jørgensen, DBC

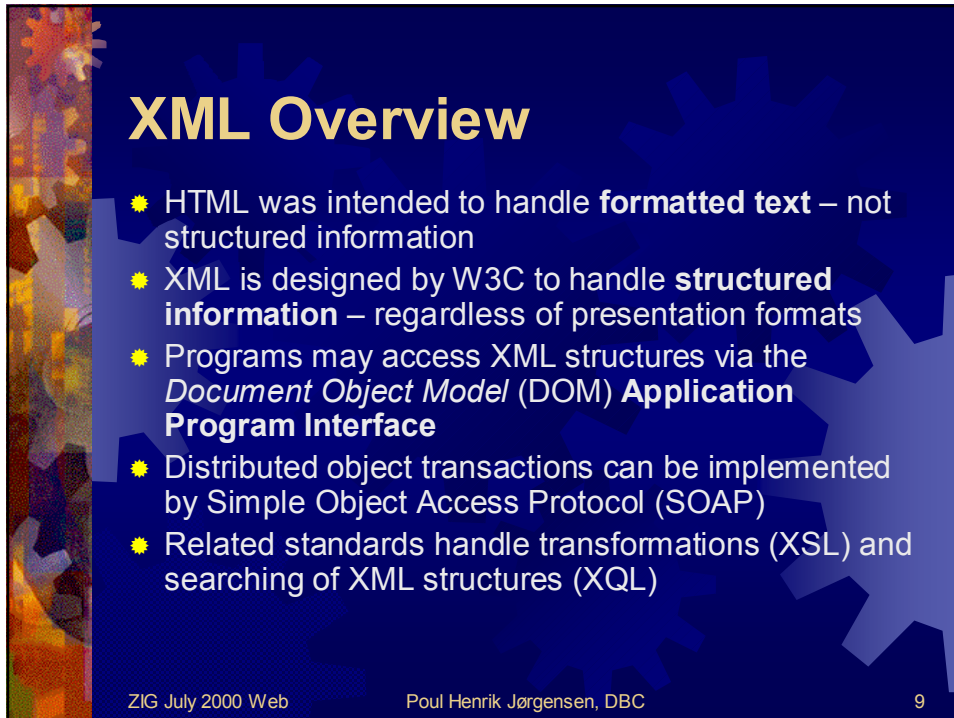

Web Search Example

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 7

What is missing on the Web?

- Structured search and retrieval
 - XML Schema and Query languages (XQL)
 - <http://www.w3.org/XML/>
- Usefull Metadata
 - Resource Description Framework (RDF)
 - <http://www.w3.org/RDF/>
- Standard system interfaces (API)
 - Document Object Model (DOM)
 - <http://www.w3.org/DOM/>
 - Simple Object Access Protocol (SOAP)
 - <http://www.w3.org/TR/SOAP/>

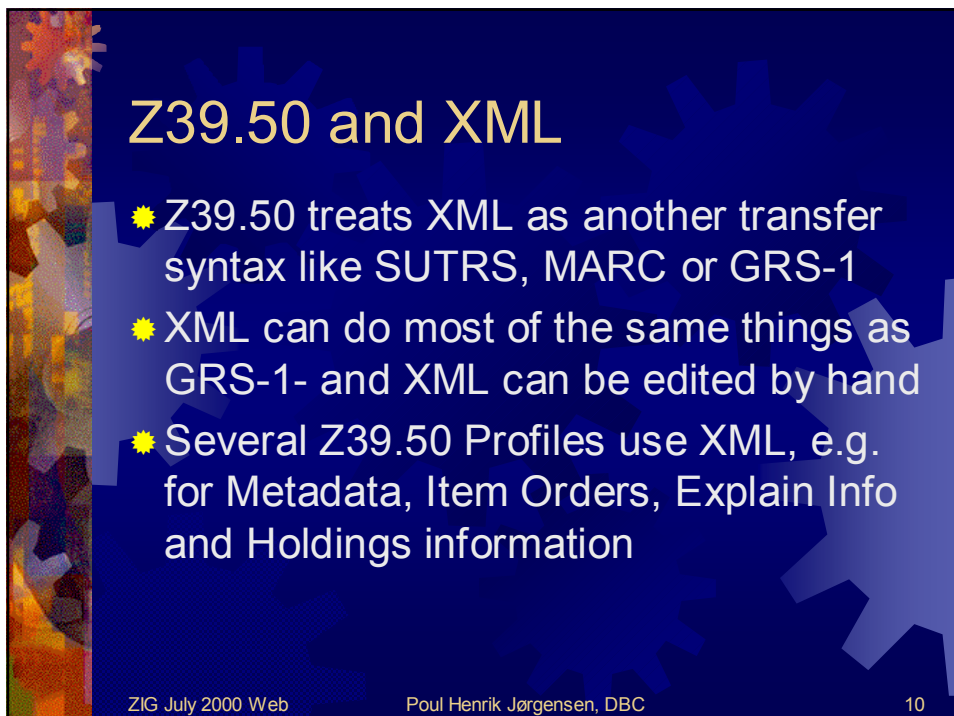

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 8

The slide features a dark blue background with a vertical strip of colorful, abstract patterns on the left side. The title 'XML Overview' is written in a large, bold, yellow font. Below the title, there are five bullet points, each starting with a yellow star icon. The text is in a white, sans-serif font. At the bottom, there is a footer with three items: 'ZIG July 2000 Web', 'Poul Henrik Jørgensen, DBC', and the number '9'.

XML Overview

- HTML was intended to handle **formatted text** – not structured information
- XML is designed by W3C to handle **structured information** – regardless of presentation formats
- Programs may access XML structures via the *Document Object Model (DOM)* **Application Program Interface**
- Distributed object transactions can be implemented by Simple Object Access Protocol (SOAP)
- Related standards handle transformations (XSL) and searching of XML structures (XQL)

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 9

The slide features a dark blue background with a vertical strip of colorful, abstract patterns on the left side. The title 'Z39.50 and XML' is written in a large, bold, yellow font. Below the title, there are three bullet points, each starting with a yellow star icon. The text is in a white, sans-serif font. At the bottom, there is a footer with three items: 'ZIG July 2000 Web', 'Poul Henrik Jørgensen, DBC', and the number '10'.

Z39.50 and XML

- Z39.50 treats XML as another transfer syntax like SUTRS, MARC or GRS-1
- XML can do most of the same things as GRS-1- and XML can be edited by hand
- Several Z39.50 Profiles use XML, e.g. for Metadata, Item Orders, Explain Info and Holdings information

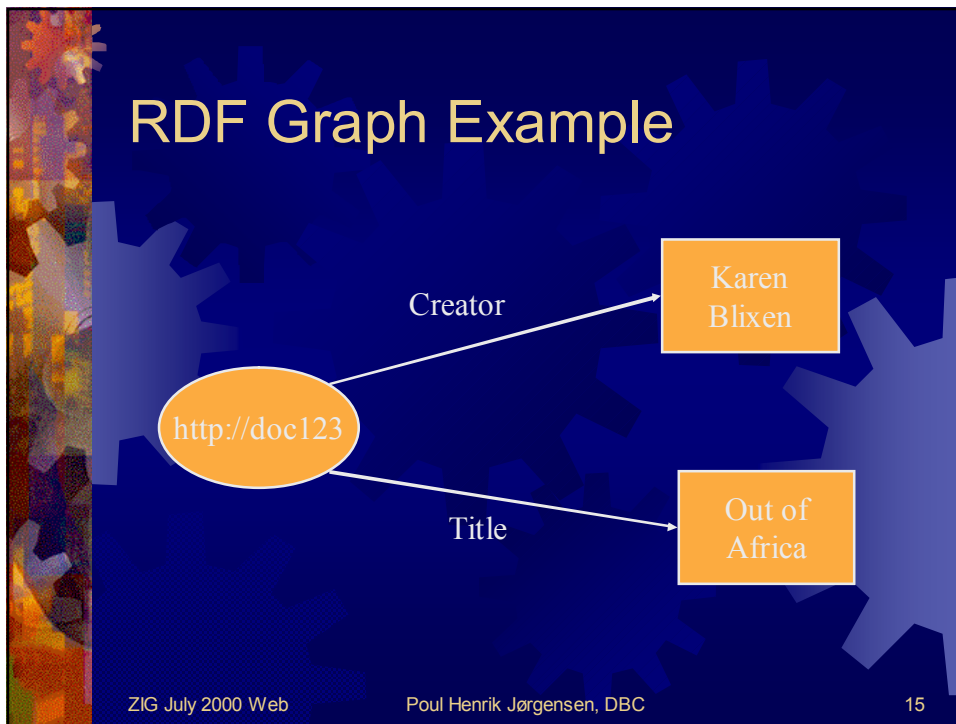

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 10

Resource Description Framework

- Describe relationships and attributes of (Internet) resources, i.e. **metadata**.
- Based on *Directed Labelled Graphs* (DLG) and classical Information Analysis.
- May be represented by XML – but is basically independent of any representation format.
- The Web may be seen as a vast relational database, where URI define unique primary keys of Web resources.
- RDF define private joins over Web resources.
- <http://www.w3.org/RDF/>

RDF Statement Example

- The resource <http://doc123> (*Subject*).
- has the Title (*Property*)
- "Out of Africa" (*Value*)
- has the Creator (*Property*)
- "Karen Blixen" (*Value*)

RDF XML/DC Example

```
<?xml version="1.0"?>
<rdf:RDF xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#"
  xmlns:dc="http://purl.org/dc/elements/1.0/">
<rdf:Description
  rdf:about="http://www.ukoln.ac.uk/metadata/resources/dc/datamodel/WD-dc-rdf/">
<dc:title> Guidance on expressing the Dublin Core
  within the Resource Description Framework (RDF)
</dc:title>
<dc:creator> Eric Miller </dc:creator>
<dc:subject> Dublin Core; Resource Description
  Framework; RDF; eXtensible Markup Language; XML
</dc:subject>
<dc:format> text/html </dc:format>
<dc:language> en </dc:language>
</rdf:Description>
</rdf:RDF>
```

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 16

RDF Navigation Example

Resource flow

Name of Person: Blixen, Karen
 Dates of Person: 1895-1962
 Title of Person: Baronesse
 Name of Person: Andrézel, Pierre
 Name of Person: Blixenová, Karen
 Name of Person: Buikuzen, Karen
 Name of Person: Dinesen, Isak
 Name of Person: Dinesen, Isak

Titel: Out of Africa
 Ophav: Blixen, Karen
 Forlag: London : Penguin
 Udgivelsesår: 1999

Titel: Den afrikanske Farm
 Ophav: Blixen, Karen
 Forlag: [Kbh.] : [Gyldendal]
 Udgivelsesår: 1994

Titel: Memorias de África
 Ophav: Blixen, Karen
 Forlag: Madrid : Alfaguara Bolsillo
 Udgivelsesår: 1997

Titel: Proscaj, Afrika
 Ophav: Blixen, Karen
 Forlag: St. Peterburg : Limbus
 Udgivelsesår: 1997

Titel: Mit Afrika
 Ophav: Watkins, David, I. 1925
 Forlag: [S.l.] : CIC Video
 Udgivelsesår: 1993

Titel: Spændinger under den tørre overflade
 Ophav: Albrechtsen, Bent

Z39.50, XML and RDF synergy

- Z39.50 can support XML as transfer syntax.
- Z39.50 can support XQL search language.
- Z39.50 can search and retrieve RDF structures like other relational data.
- Z39.50 could switch to HTTP as transmission protocol. Like OSI was replaced by TCP/IP some time ago.
- Extended Service transactions could be handled by Simple Object Access Protocol (SOAP)

<http://www.w3.org/Submission/2000/05/>

ZIG July 2000 Web Poul Henrik Jørgensen, DBC 18

Summary

- ZIG and Z39.50 could adopt relevant Web technologies such as XML, HTTP and RDF – or it could risk becoming irrelevant itself.
- The primary justification for Z39.50 is domain specific (bibliographic) applications knowledge.
- Specialised communications solutions are a liability compared to generic tools.
- It is unrealistic to promote Z39.50 as a general application protocol in competition with more well-known alternatives.
- www.portia.dk/zigjuly2000/z3950web.htm
